Early On Center Instructional Resource Alert

Now Available Under Instructional Resources

[Infants are Motivated by Hearing Themselves - Article](http://earlyoncenter.org/resource.php?ID=165)

(<http://earlyoncenter.org/resource.php?ID=165>)

Babies' repetitive babbles, such as 'dada' or 'baba,' primarily are motivated by infants' ability to hear themselves talk, say researchers. Infants with profound hearing loss who received cochlear implants to improve their hearing soon babbled as often as their hearing peers, allowing them to catch up developmentally.

[Journal of Early Hearing Detection and Intervention](http://earlyoncenter.org/resource.php?ID=166)

(<http://earlyoncenter.org/resource.php?ID=166>)

The Journal of Early Hearing Detection and Intervention is a biannual scholarly peer-reviewed online publication dedicated to advancing Early Hearing Detection and Intervention by publishing articles that describe current research, evidence-based practice, and standards of care.

The Journal of Early Hearing Detection and Intervention is a publication of the National Center for Hearing Assessment and Management (NCHAM) at Utah State University. NCHAM's mission is to support effective Early Hearing Detection and Intervention systems via training, technical assistance, and dissemination of evidence-based practices and research.

Cerebral Palsy Symptoms - Website

(<http://earlyoncenter.org/resource.php?ID=167>)

Cerebral palsy is the most common type of physical disability in childhood. It affects just over 2 children in 1,000 live births. This website is designed to raise awareness globally for cerebral palsy and other common birth injuries. Resources include sign and symptoms, causes, treatment, etc.

Cerebral Palsy Guide provides free educational materials, financial options and emotional support to help those across the country affected by cerebral palsy.
